1. Did you find the strategies and activities in this tutorial were useful for your project progress?

11 responses

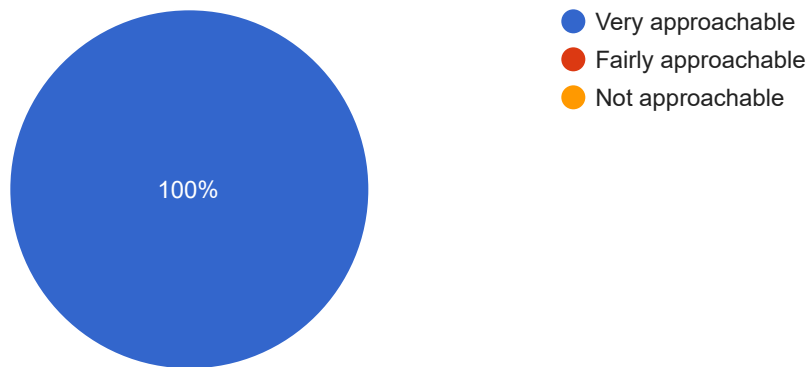

2. Did you find your tutorial instructor (Tim) improved your understanding of the course material?

11 responses

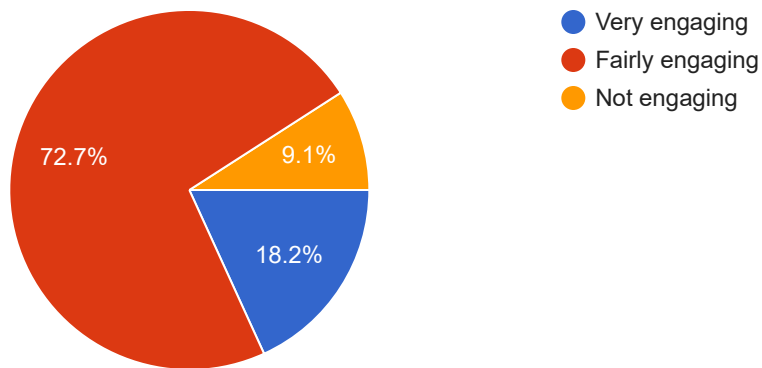

### 3. Do you find your tutorial instructor (Tim) approachable?

11 responses

### 4. Did you find the tutorial activities engaging?

11 responses

## 5. What's working in the tutorial?

11 responses

It's nice that we had time to work on things independently and we had time to work on our own projects.

I think the comfortable environment that was created by being so approachable and open to helping was a very effective!

The time to work on your projects and meet with the team is super helpful. And the chance to ask TAs questions also helps.

The meeting with other teams doing different projects to share our initial rough presentation was a good idea.

Brief introduction of topics before breakout rooms

I like the concept of this tutorial where it's mostly working on projects with the group, centred around group activities that should be done in tutorial. It was extremely useful for a project based course and helped reduce stress levels. It was easier to learn the course concepts since we had a set time to work on the projects.

## 6. What could we improve in the tutorial?

11 responses

Put it later in the day (for attendance), some of the activities seemed like busy work. The overall scheduling of the tutorials was poor, it felt like the work that we had due was being introduced the week it was due; it would've been much easier if the lecture/course material was staggered from the tutorials by one week.

Some of the tutorial worksheets are easy to ignore because i am not too sure how well we understand the worksheets so maybe further explanation for these tasks would be helpful!

Sometimes TAs recommend/tell us to assume things that the professor/client state is incorrect. Make sure there are less inconsistencies between what the TAs expects from us versus the actual graders.

More in-depth information and resources

I felt like the tutorial activities were hit or miss. Some weeks the activities really guided

## 7. How could we encourage greater participation in tutorials?

6 responses

Put them later in the day, make them more useful overall (the TAs weren't very knowledgeable of the projects, it didn't make much of a difference if we went to tutorial or just worked on a group call without a TA).

Maybe more polls would encourage participation (as it is easy for the students and also interactive)

Making attendance worth marks

I think you need to incentivize people turning their cameras on during large group activities to increase online tutorial participation. I think it's because we can sometimes feel like we're being watched with our webcams on so it's important to have people be comfortable to turn their cameras on and be engaged in the class.

I think there would have been greater participation if the environment was not virtual. Lack of participation was largely due to people not feeling the need to participate in an online setting. Maybe partitioning part of the grade to participation might encourage more participation in the virtual setting.

8. Do you have any recommendations that could help your tutorial instructor improve (Tim) their instructional approach?

7 responses

No, overall he was a great TA.

Tim is a great TA that is very patient with his students especially in online learning! One comment I might have is that Tim could maybe use more specific examples when he is teaching content, so that we have a better grasp of what we need to do.

Sometimes your tone can come off as you think groups are willfully ignorant. However, we're just confused since the course doesn't really teach us much and we know absolutely nothing about consultancy.

N/A

I personally like Tim's instructional approach and felt it worked well with my learning style.

No.

When a recurring question comes up, they could answer it at the very beginning of the

### 9. Do you have any other comments for your tutorial instructor (Tim)?

N/A

Thank you for the amazing semester! Even though you weren't 100% knowledgeable about the regulations, you gave us some amazing guidance for our sampling plan and the overall project.

I like the morning ice breaker activities you do! as its a fun way to get the class started especially at 9am!

You were very nice and supportive throughout the semester. Thank you for your hard work

Overall a good TA

Thanks

My group and I constantly felt that we could approach Tim with assistance ranging from actual report writing and presenting to understanding the nature of these types of
